## Abstracts

According to our (Global Info Research) latest study, the global Automotive DLP Headlight market size was valued at USD 88 million in 2023 and is forecast to a readjusted size of USD 189.4 million by 2030 with a CAGR of 11.5% during review period.

DLP (Digital Light Processing) is a technology path for light sources, and the light source of the DLP system can be either LED or laser. DLP inherits the anti glare function of ADB lighting, while adding more lighting partitions to achieve fine lighting partitioning and high-definition imaging projection functions. At present, DLP technology is the mainstream solution to achieve digital headlight projection function. The technology of vehicle grade DLP projection headlights is mainly mastered by Texas Instruments. As early as 1987, Texas Instruments developed the first DMD digital microscope device, and in 1996, the DLP projector was officially launched. Previously, Texas Instruments applied DLP technology to projectors, until 2018 when it collaborated with Mercedes Benz as a semiconductor supplier to develop high-resolution headlight technology.
