Abstracts

Automobile ECS system (Electronic Stability Control, electronic stability control system), also known as vehicle stability control system or vehicle dynamic stability system, is a vehicle safety technology designed to help drivers maintain vehicle stability and reduce loss of control in dangerous situations risk. The ECS system monitors the dynamic status of the vehicle through the vehicle's sensors, including the vehicle's steering, speed, tilt angle and other information. Once the system detects signs that the vehicle may be out of control, such as uncontrolled skidding, sideslip or weight loss, it will automatically intervene and take measures to restore the vehicle's stability. These measures often include slowing the vehicle, adjusting the vehicle's direction by braking individual wheels, or even adjusting engine power output.
