## Abstracts

The global Automotive ECU Controller market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

ECU is the abbreviation of Electronic Control Unit in English, also known as driving computer, on-board computer, etc. In terms of use, it is a special microcomputer controller for automobiles. ECU is the brain nerve center system of the car, which is generally installed under the dashboard of the driver's seat or near the wiper linkage lever. The ECU collects the working status information of various parts of the engine through various sensors (including temperature sensor, pressure sensor, rotation sensor, flow sensor, position sensor, oxygen sensor, knock sensor, etc.), and sends it to the ECU through the line responsible for transmission. After the ECU receives these signals, it will analyze the various signals, and then it will know the state of the function of each component of the engine and the information about its operation, and then automatically calculate according to the pre-written program. Next, which actuators should be allowed to do which things, and then send instructions to the actuators to order the actuators to work.

This report studies the global Automotive ECU Controller production, demand, key manufacturers, and key regions.
