According to our (Global Info Research) latest study, the global Automotive Electronic Dashboard market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

According to its working principle, the automotive instrument panel can be divided into three types: mechanical instrument panel, electronic instrument panel (mainly LCD) and auxiliary display panel; Among them, the electronic instrument panel is mainly used in high-end vehicles and new energy passenger vehicles. Due to the advantages of electronic instrument panel compared with ordinary instrument panel, such as better stability, richer display information, diversified styles and high level sense of science and technology, more and more vehicles are equipped with electronic instrument panel, and the size of electronic instrument panel is becoming larger and larger, and it is also widely used in the intelligent cockpit with HUD integration. Carrying electronic instrument panel has become an inevitable trend of the development of intelligent vehicles.

Automotive is a key driver of automotive electronic dashboard industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively.
