Abstracts

The global Automotive Electronics Adhesives and Sealants market size is expected to reach \$ 4296 million by 2032, rising at a market growth of 6.2% CAGR during the forecast period (2026-2032).

In 2025, global Automotive Electronics Adhesives and Sealants production reached approximately 110.5 K tons, with an average global market price of around 24.8 USD/kg.

Automotive Electronics Adhesives and Sealants are specialized materials designed for bonding and sealing electronic components in vehicles, such as ECUs, sensors, battery management systems (BMS), and radar modules. They deliver multiple core functions including waterproofing, moisture resistance, vibration absorption, high-low temperature resistance, chemical corrosion resistance, and electrical insulation, effectively protecting electronic components from harsh automotive operating environments and ensuring long-term stable and reliable operation while adopting various substrates like metals, plastics, and ceramics.

The demand for such products is driven by the rapid advancement of automotive electrification, the popularization of advanced driver assistance systems (ADAS), and stricter requirements for vehicle safety and durability, with new energy vehicles further boosting demand due to their higher reliance on electronic components. Business opportunities lie in the development of high-performance formulations like flame-retardant and low-dielectric products for new energy vehicle batteries and radar modules, the upgrading of eco-friendly low-VOC variants to meet environmental regulations, and the expansion of customized solutions for emerging electronic

components, alongside the potential in the aftermarket and regional markets with booming automotive electronics industries.
