The electronic control unit English abbreviation is ECU also known as 'driving computer', 'car computer' and so on. The ECU is equivalent to the 'brain' of the car, and controls a number of parameters such as engine ignition, air-fuel ratio, idle speed, and exhaust gas recirculation. It is the core control component of the automobile engine.

Scope of the Report:

This report focuses on the Automotive Electronics Control Unit Management in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

From the point of view of use, the ECU is a car-specific microcomputer controller. Like ordinary computers, it consists of microprocessors, memories, input/output interfaces, analog-to-digital converters, and large-scale integrated circuits such as shaping and driving. The main part of the ECU is the microcomputer, and the core component is the CPU.

From the current mainstream car enterprise supporting situation, most of the ECU circuit structure is similar, the change of control function mainly depends on the software and the input and output module changes, and there are differences depending on the tasks completed by the control system.

The ECU presents different forms depending on the location of the vehicle. In general, the ECU is equipped to the position where it is easiest to implement the functions of the electronic control system, and is designed to best fit the position-based environment.

The worldwide market for Automotive Electronics Control Unit Management is expected to grow at a CAGR of roughly 7.0% over the next five years, will reach 60400 million
