Abstracts

The global Automotive Engine Antifreeze Coolant market size is expected to reach \$ 11671 million by 2032, rising at a market growth of 3.2% CAGR during the forecast period (2026-2032).

In 2025, global production of automotive engine antifreeze coolant reached 1.978 million tons, with an average selling price of US\$4563 per ton. Automotive engine antifreeze coolant is a functional liquid specifically designed for automotive engine cooling systems. It prevents coolant from freezing at low temperatures and boiling at high temperatures, maintaining the engine's efficient operation within a suitable operating temperature range. Automotive engine antifreeze coolant uses ethylene glycol or propylene glycol as the main base fluid, supplemented with various chemical components such as corrosion inhibitors, defoamers, pH buffers, colorants, and scale inhibitors to achieve multiple functions including antifreeze, antiboiling, anticorrosion, scale prevention, and lubrication of water pumps. It is widely used in gasoline vehicles, hybrid vehicles, and pure electric vehicles (for thermal management systems). The upstream mainly involves suppliers of petrochemical raw materials (ethylene glycol, glycerin, amine chemicals) and functional additives; the downstream consists of vehicle manufacturers and the aftermarket. The industry's gross profit margin is approximately 25%–35%, with high-end brands reaching over 40%.
