Abstracts

The global Automotive Engine Flywheel market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

The market for Automotive Engine Flywheels is closely tied to the automotive industry's demand for efficient and reliable engine components. Key aspects of the market include:

Weight and Material Considerations:

Flywheels are designed with considerations for weight and material, balancing the need for energy storage with the overall weight of the engine.

Integration with Transmission Systems:

Flywheels play a crucial role in the operation of manual transmissions, where they provide the necessary inertia for smooth engagement of the clutch.

Dual-Mass Flywheels:

The market has seen the adoption of dual-mass flywheels designed to reduce vibrations and improve the overall driving experience.

An automotive engine flywheel is a mechanical device connected to the crankshaft of an engine. Its primary function is to store rotational energy generated by the engine's movement during the power stroke and release it during the non-power strokes, providing a smoother and more consistent rotation to the crankshaft. The flywheel also

serves as a mounting surface for the clutch assembly in manual transmission vehicles.
