According to our (Global Info Research) latest study, the global Automotive Engine Management Systems market size was valued at USD 185990 million in 2023 and is forecast to a readjusted size of USD 266500 million by 2030 with a CAGR of 5.3% during review period.

An automotive engine is a device or a machine that consumes fuel as an input and produces mechanical energy as output. It is used in passenger vehicles, airplanes, tractors, buses, two-wheelers, etc. The engine is the integral component of any vehicle that helps to convert chemical energy provided by fuel, in the form of heat, into mechanical energy in the form of power. The Engine Management System (EMS) is responsible for controlling the amount of fuel that is being injected and for adjusting the timing of the ignition.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
