## Abstracts

The global Automotive ESD Suppressor market size is expected to reach \$ 39.06 million by 2032, rising at a market growth of 8.4% CAGR during the forecast period (2026-2032).

In 2025, global sales of automotive ESD suppressors reached 12 million units, with an average selling price of \$1.80 per unit and a CAGR of 8.6%. Automotive ESD suppressors are critical electronic components used to protect vehicle electronic systems from electrostatic discharge damage, and are widely used in vehicle control units, infotainment systems, sensor modules, and power electronics. These suppressors absorb or conduct electrostatic energy, preventing voltage spikes from damaging sensitive electronic components, ensuring the stability and safety of the entire vehicle's electronic system, while extending component lifespan and reducing maintenance costs. Total production capacity was 15 million units, with a gross margin of approximately 22%. Upstream raw materials mainly include semiconductor chips, metallized films, resistors, and plastic packaging materials, with material consumption varying depending on the suppressor type and capacity. Downstream demand primarily comes from OEMs, automotive electronic module suppliers, and the aftermarket, with consumption mainly driven by vehicle ECUs, sensor modules, and infotainment systems. With the accelerating trends of automotive electronics, electrification, and intelligence, especially in new energy vehicles, ADAS, and autonomous driving systems, the market demand for ESD suppressors continues to grow. Future development will expand towards high reliability, high voltage resistance, high integration, and customization, and has broad market potential and business opportunities in improving the safety, reliability, and overall intelligence level of automotive electronics.
