The global Automotive Exhaust Noise Resonator market size is expected to reach \$ 1387 million by 2032, rising at a market growth of 4.6% CAGR during the forecast period (2026-2032).

In 2025, global Automotive Exhaust Noise Resonator production reached approximately 54.44 million units, with an average global market price of around USD 18 per unit.

The gross profit margin of major companies in the industry is between 15.62%-29.84%.

In 2025, the global production capacity of Automotive Exhaust Noise Resonator was approximately 71.64 million units.

Automotive Exhaust Noise Resonator is an acoustic tuning component installed in vehicle exhaust systems to reduce specific noise frequencies, booming sounds and unwanted resonance. It may use Helmholtz chambers, perforated tubes, expansion cavities or tuned pipe structures to shape exhaust sound without replacing the main muffler. The product is used in passenger cars, light trucks, performance vehicles, hybrid vehicles and commercial vehicles with internal combustion engines. The market includes exhaust resonators and tuned acoustic sections, but excludes full mufflers, catalytic converters, tailpipes and active sound systems.

The industry chain includes stainless steel, aluminized steel, perforated tubes, shells, acoustic packing materials, welding consumables, brackets, flanges, forming tools and corrosion-resistant coatings. Midstream production covers tube forming, shell stamping, perforation, welding, chamber assembly, acoustic tuning, leak testing, corrosion testing and packaging. Downstream demand comes from exhaust system suppliers,

automakers, aftermarket performance parts, commercial vehicle producers and repair channels. Growth is supported by sound quality requirements, vehicle comfort, emission system packaging, hybrid vehicle acoustic control and aftermarket exhaust upgrades.

This report studies the global Automotive Exhaust Noise Resonator production, demand, key manufacturers, and key regions.
