## Abstracts

According to our (Global Info Research) latest study, the global Automotive Fault Diagnostic Scan Tool market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The automotive fault diagnostic scan tool can be plugged into the OBD port of almost any modern vehicle to obtain valuable information and real-time data about the vehicle's systems. The wireless scanner can connect to your phone via Bluetooth and let you access your car data through a mobile app.

The growing demand for advanced automation systems in modern vehicles has led to a surge in the electrification of automotive components. However, manually diagnosing these electronic components using a variety of tools is time-consuming and expensive. To overcome this challenge, garage equipment manufacturers have developed a standard tool to diagnose the vehicle by connecting a cable to the car's diagnostic connector. These scan tools consist of electronic devices and software that are used to identify any faults in the vehicle. They can also be used to detect and analyze electronic system faults and reprogram control modules in different types of vehicles. The demand for automotive diagnostic scan tools is expected to grow due to the increasing adoption of OBD-II (On-Board Diagnostics II) standards by fleet owners. The U.S. and European governments have mandated the use of OBD-II in all vehicles. The system allows telematics devices to record information on factors such as fuel use, engine rpm, fault codes and vehicle speed, which can be used to monitor the performance and usage of fleet vehicles. This information can be accessed through a software interface, allowing fleet operators to track key performance parameters such as fuel consumption, trip start and end times, and speed. Hence, the increasing use of on-board diagnostics in

commercial fleets is expected to drive the growth of the automotive diagnostic scan tools market. Growing demand for automobiles in developing countries, driven by urbanization, is expected to increase the demand for automotive diagnostic scanning tools in the coming years. Customers are now more inclined to purchase vehicles equipped with on-board diagnostic scanning solutions. Demand in these countries is expected to surge as user awareness of such solutions continues to grow. With the widespread use of technologies such as electronic control modules and advanced driver assistance systems, vehicle architectures are becoming increasingly complex. Troubleshooting such systems is technically challenging for the average end user. Therefore, these scan tools, which offer standard fault codes and other services, provide consumers with a simple interface to identify problems with their cars and avoid costly shop repairs for minor problems. Therefore, the complexity of automotive electronics is likely to drive the market growth.
