## Abstracts

The global Automotive Front Camera market size is expected to reach \$ 3234.4 million by 2029, rising at a market growth of 18.5% CAGR during the forecast period (2023-2029).

The automotive front camera market refers to the industry involved in the production, distribution, and installation of camera systems specifically designed for the front-view monitoring in vehicles. Front cameras, also known as forward-facing cameras or front-view cameras, help drivers have a clear view of the road ahead and assist in various advanced driver assistance systems (ADAS) functionalities.

Automotive front camera systems consist of a camera module typically mounted on the front windshield or grille of the vehicle. The camera captures video footage of the road ahead, and the feed is processed and analyzed by the system's control unit. The system may also include other sensors, such as radar or lidar, to enhance the camera's functionality and provide a comprehensive view of the vehicle's environment.

An automotive front camera module is a device used in modern vehicles to capture images of the road ahead. It is typically located on the front windshield, near the rearview mirror, and uses a lens to capture images of the road in front of the vehicle. The camera module is connected to the vehicle's onboard computer, which processes the images to provide information to the driver and to assist in the operation of various safety systems.
