Abstracts

Automotive glow plug is a part that assists during cold start. It creates ideal ignition conditions for the injected fuel to burn through electrically generated thermal energy that is brought into the combustion chamber. Glow plugs are used in diesel engines to help start the engine with low temperature, especially in the winter. Glow plugs can be divided into metal type and ceramic type based on the material. Now, some glow plugs can heat up to more than 1000° in seconds.

Scope of the Report:

This report focuses on the Automotive Glow Plug in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

Europe is the largest market of glow plug. The diesel vehicles in Europe occupied more than 70% of the total amount of diesel vehicles in the global. And the weather in Europe is colder than other regions. So the demand of glow plug is largest.

In US, the total amount of vehicles is large, but the share of diesel vehicle is little. So the market of glow plug is smaller than in Europe. But the manufacturing technology is developed in US, so there are some major glow plug manufacturers like Borgwarner, Delphi and Federal-Mogul, all of which are the leading suppliers of glow plug in the world.

In China, there are many manufacturers of glow plugs. But both their capacity and technology have a large barrier with the international manufacturers like Borgwarner. Now, to meet the demand of domestic automotive industry, some foreign companies have built plants in China. To maintain the market share, Chinese glow plug manufacturers should spend more money and time on research and development.

The worldwide market for Automotive Glow Plug is expected to grow at a CAGR of roughly 4.5% over the next five years, will reach 37 million US\$ in 2023, from 30 million US\$ in 2017, according to a new GIR (Global Info Research) study.
