Abstracts

According to our (Global Info Research) latest study, the global Automotive Grade Boost Inductor market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

Boost inductors have the advantages of small size, high temperature resistance, and low magnetic leakage, and are usually used in boost circuits. Automotive-grade boost inductors are currently mainly used in plug-in hybrid electric vehicles for driving boost scenarios. Since plug-in hybrid electric vehicles are equipped with fewer batteries than pure electric vehicles, high voltage output cannot be achieved directly. In order to reduce costs, meet performance requirements, and improve market competitiveness, some vehicle manufacturers use boost inductors and power switching devices to form a boost circuit, which realizes the function of increasing the on-board battery voltage to drive the high-voltage drive motor.
