The global Automotive Grade Chip Bead market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Automotive grade chip bead is an electronic component used in automotive applications to filter and suppress electromagnetic interference (EMI) and radio frequency interference (RFI) in electronic circuits. It is a type of ferrite bead, which is a small cylinder-shaped device made of ferrite material that is designed to block high frequency noise while allowing low frequency signals to pass through. The automotive grade chip bead is specifically designed and tested to meet the rigorous requirements of the automotive industry, such as high-temperature, vibration, and mechanical shock resistance. It is commonly used in automotive electronic systems such as engine control modules, infotainment systems, and advanced driver assistance systems (ADAS).
