According to our (Global Info Research) latest study, the global Automobile Heat Exchangers market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

An automobile heat exchanger is a device designed for the purpose of allowing heat transfer from one medium to another at different temperatures. Most commonly, these mediums consist of two fluids that flow close to each other and are separated by a material, often metals, with good heat transfer properties. The fluids are primarily characterized by their temperatures at the entrance to the heat exchanger. The hot (warm, in figure below) fluid, the fluid with the highest temperature initially, transfers heat to the cold fluid as they both pass through the heat exchanger, thus lowering the temperature of the hot fluid and raising the temperature of the cold fluid.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
