## Abstracts

The global Automotive Heat Shield market size is expected to reach \$ 28500 million by 2032, rising at a market growth of 6.3% CAGR during the forecast period (2026-2032).

A heat shield is designed to shield a substance from absorbing excessive heat from an outside source by either dissipating, reflecting or simply absorbing the heat. It is often used as a form of exhaust heat management.

Due to the large amounts of heat given off by internal combustion engines, heat shields are used on most engines to protect components and bodywork from heat damage. As well as protection, effective heat shields can give a performance benefit by reducing the under-bonnet temperatures, therefore reducing the intake temperature. Heat shields vary widely in price, but most are easy to fit, usually by stainless steel clips or high temperature tape.

In our report, the count scope mainly include the passenger vehicle and light commercial vehicle and exclude off high way vehicles and heavy commercial vehicles.

Sumitomoriko, DUPONT, Autoneum, Elringklinger, Federal-Mogul, DANA, Lydall, Morgan, Zhuzhou Times and Tuopu are the key players of Automotive Heat Shield, with about 44% market shares.

Europe is the largest consumption region, it occupies about 26% market share, the North America occupies about 20% market share, the Japan & Korea occupies about 15% market share.
