Abstracts

The global Automotive Hub Bearing market size is expected to reach \$ 11750 million by 2032, rising at a market growth of 5.8% CAGR during the forecast period (2026-2032).

Automotive Hub Bearing perform two very important jobs in a vehicle's suspension. The hub bearing allows the wheels to rotate with minimal function, and they also support the vehicle's weight. To be able to do both of these jobs, the bearings must be in near perfect condition. The seals must also be leak free to keep the lubricant inside the bearings and contaminants out. In an average sedan that weighs around 3,400 lb, each pair of front Hub Bearing, as well as the rear wheel or axle bearings, each support 850 pounds. This all depends on the front to rear weight distribution of the vehicle. It's a lot of weight that needs to be supported over tens of thousands of miles.

The global key manufacturers of automotive hub bearing are NTN, NSK, Schaeffler, SKF, ILJIN, Wanxiang, JTEKT, Shuanglin NTP and so on. The top five manufacturers have a total market share of 60%, with the largest manufacturer being NTN with a 25% market share. Global origins are mainly located in North America, Europe, Japan, China, Southeast Asia, India and other regions, of which China is the largest production region with a market share of 40%. In terms of product categories, third-generation wheel bearings have the largest market share with 42%, followed by second-generation wheel bearings with 41%. In terms of applications, passenger cars have a larger market share with 60%, while commercial vehicles have a lower share.
