Abstracts

This report studies the Automotive Hub Bearing market. Automotive Hub Bearing perform two very important jobs in a vehicle's suspension. The wheel bearing allows the wheels to rotate with minimal function, and they also support the vehicle's weight. To be able to do both of these jobs, the bearings must be in near perfect condition. The seals must also be leak free to keep the lubricant inside the bearings and contaminants out. In an average sedan that weighs around 3,400 lb, each pair of front Hub Bearing, as well as the rear wheel or axle bearings, each support 850 pounds. This all depends on the front to rear weight distribution of the vehicle. It's a lot of weight that needs to be supported over tens of thousands of miles.
