According to our (Global Info Research) latest study, the global Automotive Hub Center Cover market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A hub center cover is a decorative disk on an automobile wheel that covers at minimum the central portion of the wheel, called the hub. Hub center covers provide the final seal of the wheel bearing to the outside environment. An automobile wheel cap is used to cover the wheel hub and the wheel fasteners to reduce the accumulation of dirt and moisture. It also has the function of decorating the car.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022. Increase in global vehicle production and sales is primarily driving the growth of this market. For example, total vehicle production, including passenger cars and commercial vehicles, will increase from 80 million in 2021 to more than 85 million in 2022, according to

vehicle production figures published by OICA. Automobile production continued to grow post-pandemic. Hence, these growing automotive production activities have impacted the demand for automotive rims from OEMs. In addition, growing adoption of personal transportation and rising car sales driven by factors such as rising disposable income and living standards of residents in emerging economies are expected to drive market growth over the next few years.
