Abstracts

The automotive hydraulic system involves a transmission system that uses pressurized hydraulic fluid to drive a mechanical system. Thus, the hydraulic system functions on the transfer of energy due to the pressure difference between two points. This is radically different compared to the traditional mechanical system, which relies on the system functioning due to the flow of kinetic energy. The hydraulic system is considered more accurate compared to the traditional mechanical drive systems, since the mechanical system can undergo a reduction in efficiency with time because of friction. Comparatively, efficiency drops moderately in the hydraulic system, over time.
