## Abstracts

The global Automotive Infotainment Platform market size is expected to reach \$ 4245 million by 2032, rising at a market growth of 5.4% CAGR during the forecast period (2026-2032).

In 2025, global sales of Automotive Infotainment Platform reached approximately 9.7 million units, with an average market price of about USD 300 per unit, an annual production capacity of roughly 10.1 million units, and an industry-average gross margin of approximately 13%.

An Automotive infotainment platform is an integrated digital hardware-software foundation inside the cabin, supporting information display, navigation, media, voice interaction, smartphone integration, connected services, and multi-screen HMI. By 2025, its mainstream production form is no longer just a standalone head unit; it is increasingly a platform product built around a cockpit domain controller or cockpit HPC that can coordinate clusters, center displays, passenger displays, audio, and some AI/cloud functions with ongoing OTA evolution.

The upstream side mainly includes automotive chips, modules, display panels, and the base software stack such as OS, middleware, HMI, voice, and connectivity. One industry overview notes that chips, modules, and display panels are the main raw materials for smart-cockpit solutions, with chips alone accounting for 20%-35% of cockpit-domain-controller cost, and Qualcomm holding 7.19 million installations or 72.7% of China's 2025 cockpit-domain-controller chip market. The midstream is formed by Tier 1/Tier 1.5 solution providers and system integrators that package chips, displays, operating systems, voice, and connectivity into mass-producible cockpit platforms, while the downstream consists of OEM front-installation, dealership and

aftermarket services, and end users.
