Abstracts

The global Automotive Injection Molded Ferrite market size is expected to reach $ 985 million by 2032, rising at a market growth of 6.7% CAGR during the forecast period (2026-2032).

Automotive injection molded ferrite refers to ferrite magnetic materials used in automotive components, which are produced by compounding ferrite magnetic powder with engineering plastics such as PA6, PA12, PPS, and manufactured using precision injection molding technology. This type of product combines the magnetic properties of ferrite and the advantages of plastic processing. It has the characteristics of lightweight, corrosion resistance, high dimensional accuracy, complex structural forming, and is suitable for large-scale automated production. It is mainly used in the fields of automotive micro motors, BLDC motors, sensors, encoders, actuators, thermal management systems, and auxiliary drive components for new energy vehicles.

In 2025, global Automotive Injection Molded Ferrite production reached approximately 33.56 K MT, with an average global market price of around US$ 18 per kg.The annual production capacity of automotive injection molded ferrite is 50 K MT, with a gross profit margin of about 35%. In the future, with the increasing penetration rate of new energy vehicles and intelligent vehicles, high-performance automotive injection molded ferrite products will become an important direction for profit growth.

The upstream mainly consists of raw material suppliers such as ferrite magnetic powder, iron oxide, strontium carbonate, as well as engineering plastic enterprises such as PA6, PA12, PPS, etc. The downstream is mainly used in automotive micro motors, BLDC motors, sensors, actuators, thermal management systems, and auxiliary systems for new energy vehicles.

The cost of raw materials accounts for about 65%; Labor costs account for 10%; The manufacturing cost accounts for 25%.

The injection molded ferrite for automobiles benefits from the development of automotive electronics, new energy vehicles, and the increasing demand for intelligent components, and the market maintains stable expansion. With the increase in the number of car motors, the popularization of electrification systems, and the increasing demand for lightweight, the application of injection molded ferrite in the field of automotive motors and sensors continues to expand. Among them, traditional micro motor magnets contribute mainly to sales, while high-performance PPS based injection molded ferrite, multipole magnetic rings, and automotive sensor magnets contribute higher value with higher technical requirements. In the future, market competition will focus on high-performance composite materials, precision injection molding processes, automotive grade reliability certification, and global supply chain capabilities. Enterprises with material research and development and scale manufacturing advantages will have greater market opportunities.
