Abstracts

The global Automotive Injection Molded Parts market size is expected to reach \$ 3469 million by 2032, rising at a market growth of 6.7% CAGR during the forecast period (2026-2032).

In 2025, global sales of automotive injection molded parts reached 260 million units, with an average selling price of US\$8.2. Automotive injection molded parts are functional and structural components of automobiles made from engineering plastics or modified plastics and molded by injection molding machines under high temperature and pressure. They are characterized by high dimensional accuracy, good batch consistency, and the ability to be integrated into designs, and are widely used in automotive interiors, exteriors, powertrain systems, electrical systems, and body structures. Its upstream raw materials mainly include resins such as PP, ABS, PA, PC, and PBT, as well as glass fiber, mineral fillers, and additives. On average, each piece consumes approximately 0.85 kg of plastic and 0.15 kg of fillers and additives. Downstream, it mainly supplies OEMs and Tier 1 parts suppliers, with interior parts accounting for 38%, exterior parts for 32%, functional structural parts for 20%, and electrical and other parts for 10%. The global total production capacity is approximately 320 million pieces per year, and the overall industry gross profit margin is approximately 20%-30%. In terms of downstream consumption, new car parts account for 70%, and after-sales replacement and repair account for 30%. The future lies in upgrading to lightweight, highly integrated, recyclable, and intelligent functional parts. Against the backdrop of increasing penetration of new energy vehicles, rapid development of automotive electronics and smart cockpits, and recovery of global automobile production, the demand for automotive injection molded parts maintains steady growth, presenting business opportunities for simultaneous large-scale capacity expansion and material upgrades.
