According to our (Global Info Research) latest study, the global Automotive AC Compressor market size was valued at USD 2356.4 million in 2023 and is forecast to a readjusted size of USD 3924.8 million by 2030 with a CAGR of 7.6% during review period.

The automotive AC compressor is a key element of the HVAC system. HVAC systems are widely accepted among all class of vehicles and across all regions, irrespective of climatic conditions. The AC compressor compresses the refrigerant, primarily R134a, and sends it to the condenser. The AC compressor is used for pressurizing the AC unit and keeping R134a flowing so that it can work properly. The AC compressor works in a constant on-off cycle. The conventionally used AC compressor is driven by the engine via a V-belt and pulley.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
