The global Automotive Integrated Display market size is expected to reach \$ 7323 million by 2032, rising at a market growth of 7.4% CAGR during the forecast period (2026-2032).

An automotive integrated display is an in-vehicle display system that integrates multiple display and control interfaces within the vehicle cockpit. It typically combines instrument cluster displays, central infotainment screens, passenger entertainment displays, or multi-screen interactive interfaces to provide drivers and passengers with vehicle status information, navigation, multimedia content, and control functions. The system integrates hardware and software to deliver a unified human-machine interface and is a key component of intelligent cockpit systems.

Upstream suppliers include display panel manufacturers, touch module producers, automotive-grade semiconductor suppliers, and electronic component providers.

Downstream applications mainly involve passenger vehicle intelligent cockpit systems, advanced driver information displays, and in-vehicle infotainment systems. The overall industry gross margin generally ranges from 15% to 30%, positioning it within the automotive electronics and intelligent cockpit segment.

Global production of automotive integrated displays is projected to reach 24 million units by 2025, with an average price of \$180 per unit.
