According to our (Global Info Research) latest study, the global Automotive Intelligent Diagnosis Computer market size was valued at US\$ 1689 million in 2025 and is forecast to a readjusted size of US\$ 2630 million by 2032 with a CAGR of 6.6% during review period.

Automotive intelligent diagnostic computers are tools used to detect and diagnose automotive faults. They can read the electronic control unit data inside the vehicle, identify and diagnose vehicle problems. These devices are usually connected to the vehicle through the OBD-II interface, read and clear fault codes, monitor vehicle sensor data, analyze engine performance, detect emission conditions, etc.

The growth of the global automotive intelligent diagnostic computer market in 2024 will mainly benefit from the promotion of new energy vehicles and the wave of intelligence, the tightening of policies and regulations, and the explosion of aftermarket demand. With the increase in the penetration rate of electric and intelligent vehicles, traditional diagnostic equipment is difficult to meet the software diagnosis, battery management and OTA upgrade needs of new vehicles, and countries have strengthened emission supervision (such as the EU Euro 7 standard) and vehicle networking safety regulations, further forcing automakers and maintenance organizations to upgrade their equipment. At the same time, the growth of global car ownership and consumers' dependence on efficient maintenance services have driven the demand for equipment procurement in independent repair shops and 4S stores. Although there may be economic fluctuations and supply chain cost pressures in the short term, in the long run, technological innovations such as AI diagnosis and remote cloud collaboration, as well as the potential of emerging markets such as Southeast Asia and Latin America, will

continue to drive industry expansion.

From a regional perspective, North America will dominate the global market with a share of 37.83% in 2024, with its high car ownership, mature independent after-sales system and strict regulations supporting its leading position; Europe (28.02%) follows closely, relying on high-end car inventory and technology-oriented demand. Future growth momentum will tilt towards Asia-Pacific: China's market size in 2024 will be US\$189.5 million (accounting for 12.78%), and is expected to increase to US\$304.4 million (accounting for 13.08%) in 2031. The growth rate is significant but the share increase is limited, highlighting the fierce competition between North America (CAGR 7.72%) and China. Regional strategies are clearly differentiated: North America relies on technology leaders such as Snap-on to consolidate the high-end market; China relies on the popularization policy of new energy vehicles (the penetration rate target exceeds 50% in 2030) and the high cost-effectiveness of local manufacturers (such as Daotong and Yuanzheng) to seize the mid-end market and expand to Southeast Asia; Europe focuses on equipment compatibility and low-carbon design to adapt to luxury car brands and environmental regulations.

In the current market, Snap-on leads with a share of 18.53%, with advantages in full industry chain coverage (hardware + software + database) and North American local service network; the second-tier Bosch, Daotong Technology, Yuanzheng Technology, etc. account for a total of 36%, sharing the market through differentiated positioning. Future competition will intensify around three dimensions: technical barriers (portability, AI algorithms, and car-cloud collaboration), localized services (such as adaptation to China's new energy protocols), and ecological cooperation (data sharing with automakers and insurance companies). At the same time, emerging forces (such as Tesla's self-developed tools) and cross-border competitors (consumer electronics manufacturers entering the Internet of Vehicles) may reshape the landscape. It is recommended that manufacturers increase R&D investment, deploy emerging markets, and enhance comprehensive service capabilities through mergers and acquisitions to cope with the trend of increasing industry concentration.
