Automotive interior hard trims are all of the parts of vehicle that are more decorative than functional. Its primary purpose is to make the inside of the car into a comfortable and warm environment. Examples of trim may include a Door Panels, Instrument Panels, Pillar Trims, Consoles, Headliners and others.

The automotive industry is focusing on reducing vehicle weight to improve fuel efficiency and reduce emissions. There is a growing trend towards using sustainable materials in automotive production, including bio-based plastics and recyclable materials. This shift is appealing to environmentally conscious consumers and aligns with manufacturers' sustainability goals. Plastic interior trims are lighter than traditional materials like metal or wood, contributing to this trend. Plastics can be molded into complex shapes and designs, offering greater flexibility for car manufacturers in terms of styling and personalization of vehicle interiors. Advances in surface finishing and texturing technologies allow manufacturers to produce plastic trim that can mimic various materials, including leather and wood, enhancing the visual appeal of interiors.

The shift towards electric vehicles (EVs) and autonomous vehicles is creating new opportunities for interior design, focusing on creating spacious and minimalist designs where plastic trims can be effectively utilized. Modern vehicles incorporate more electronics and smart features, for which plastic materials can be adapted and integrated seamlessly. The growth of the automotive industry, particularly in regions like Asia-Pacific, is contributing to the increasing demand for plastic interior trims as more vehicles are produced and sold.
