According to our (Global Info Research) latest study, the global Automotive Adaptive Lighting market size was valued at USD 15050 million in 2023 and is forecast to a readjusted size of USD 19830 million by 2030 with a CAGR of 4.0% during review period.

Lighting is a very important part of the automotive industry due to the growing preference of the environment concern and increased safety. The increase in the development of technology in automotive industry have transformed from the use of gas discharge based light source to Light emitting diode. The laser technology is the most common type of light source used in adaptive lighting market. The decline in the price of LED and growing increase in technology have led to the growth of the automotive adaptive lighting market. The decline in the price of LED have led to increase in use of the adaptive lighting in the high end-luxury cars.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the

world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
