## Abstracts

According to our (Global Info Research) latest study, the global Automotive Laminated Glass market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Laminated glass is created by bonding multiple layers of glass together while under pressure and heat, with a resin called polyvinyl butyral (PVB.) This process creates single sheets of glass that have multiple layers. The PVB produces high sound insulation and helps keep the glass from breaking apart easily. Before shattering, laminated glass will bend and flex. Despite not being as strong as tempered glass, laminated glass blocks around 99 percent of ultraviolet light transmission.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
