Abstracts

The global Automotive Lithium Ion Cell market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029). Lithium batteries are rechargeable batteries that create electric current due to the movement of lithium ions between the cathode material (negative electrode) and the anode material (positive electrode). The materials used in a lithium-ion battery are lithium-based compounds for the anode and usually a graphite carbon cathode. The electrodes are separated by an electrolyte which varies based on the particular type of lithium battery technology.
