According to our (Global Info Research) latest study, the global Automotive Lubricants market size was valued at USD 134250 million in 2023 and is forecast to a readjusted size of USD 155330 million by 2030 with a CAGR of 2.1% during review period.

Automotive lubricant is a substance introduced to reduce friction between moving surfaces. It may also have the function of transporting foreign particles. The property of reducing friction is known as lubricity (or slipperiness).

Automotive lubricant as its name implies have to perform in different types of vehicles both petrol and diesel under a variety of operating conditions. Modern vehicles are fuel efficient and comfortable with high levels of performance. They are required to meet stringent emission norms. Quality requirement of such lubricants are established by the Society of Automotive Engineers (SAE) and are specified in its classification system.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the

world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
