According to our (Global Info Research) latest study, the global Automotive Magnetic Sensor ICs market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

Automotive magnetic sensor ICs are sensor chips used in automobiles, which can convert the changes in the magnetic properties of sensitive components caused by external factors such as magnetic field, current, stress and strain, temperature, and light into electrical signals, thereby detecting the corresponding physical quantities. Mainly divided into current sensor chips, linear and angular position sensor chips, speed sensor chips, etc.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
