The global Automotive Manual Steering Column market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Automotive manual steering column is a mechanical device located within the steering system of a vehicle. It is responsible for transferring the driver's input from the steering wheel to the steering mechanism.

Manual steering columns consist of several components such as the steering wheel, shaft, column, and gears. The steering wheel is attached to the shaft which then connects to the steering column, which houses the gears. The gears, in turn, engage with the steering mechanism to control the vehicle's direction.

Manual steering columns are operated by the driver's physical effort. The driver must turn the steering wheel, which rotates the shaft and column to engage the steering mechanism. Manual steering systems are more common in older vehicles, sports cars, and race cars, where the driver requires more direct control over the vehicle's steering.

Modern vehicles are equipped with power steering systems, which use hydraulic or electric power to assist with steering, making it easier to control the vehicle. However, manual steering systems are still used in some applications, such as heavy-duty trucks, agricultural and construction equipment, and off-road vehicles, where the simplicity and ruggedness of a manual system are preferred.

This report studies the global Automotive Manual Steering Column production, demand, key manufacturers, and key regions.
