Automobile motor rotor balancing machine is a kind of equipment specially used to detect and correct the unbalance of automobile motor rotor, belonging to dynamic balancing machine. Its core function is to accurately identify the size and position of imbalance by rotating the rotor at high speed and measuring vibration signals, and then adjust the mass distribution of the rotor by weighting or removing weight to ensure that it reaches a dynamic balance state when rotating. This kind of equipment is widely used in the field of new energy vehicles and traditional automobile motor manufacturing and maintenance, aiming to improve the stability of motor operation, reduce energy consumption and prolong service life.
