## Abstracts

According to our (Global Info Research) latest study, the global Automotive Nickel Wire market size was valued at USD 88 million in 2023 and is forecast to a readjusted size of USD 111.2 million by 2030 with a CAGR of 3.5% during review period.

Nickel wire is a metal wire with good mechanical strength, corrosion resistance and high heat resistance.

Nickel wire is widely used in engine components such as pistons, valve heads, cylinder liners and bearing surfaces. The malleability of nickel metal makes it ideal for components that need to be machined or formed into complex shapes for tight fit in engines. They are also resistant to corrosion caused by high temperatures and water exposure, further extending their lifespan.

Nickel wire is also used in transmission components such as gears, shafts and bearings. Many transmissions require components that can withstand high temperatures and pressures without failing too quickly. Nickel alloys provide the necessary strength while still being light enough and flexible enough to fit into the tight spaces inside the transmission housing.

Finally, nickel wire is used in exhaust system components such as mufflers, catalytic converters and tailpipes due to its resistance to corrosion caused by heat and moisture. These components must be able to withstand extreme temperatures without becoming brittle or cracking over time. The ductility of nickel alloys makes them ideal for these types of applications, as they can be easily molded into complex shapes without compromising their strength or durability.

The key global producers of automotive nickel wire are VDM Metals GmbH, Deutsche Nickel GmbH, Raajratna, night Precision Wire, JLC Electromet, Alleima, and Leoni AG. the top five producers together account for over 30% of the market share, with the largest producer being VDM Metals GmbH, with a 10% market share.
