## Abstracts

According to our (Global Info Research) latest study, the global Automotive Nonwoven Composites market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Nonwoven composites are used in various automotive applications such as parcel trays, floorboards, hood liners, trunk trim, headliners, door panels, and underbody shields. Reinforcements can be synthetic fibers (fiberglass, polyester fibers, carbon fibers, and aramid fibers) or natural fibers (jute, flax, or hemp), or a combination of these. Automotive nonwoven composites offer advantages such as weight reduction, improved strength-to-weight ratio, design flexibility, noise reduction, and resistance to corrosion and chemicals. These composites help enhance the overall performance, durability, safety, and aesthetics of vehicles while meeting the industry's stringent requirements.
