## Abstracts

Just like how IT software and operating systems receive regular updates from their vendors, vehicles receive software updates from their manufacturers. Software updates are an integral part of the overall user experience as they contain important feature enhancements and crucial security patches. Traditionally, software updates are performed in person at service centers. But as cars become increasingly connected today, OEMs are trying a new approach by sending and installing software updates over the air (the Internet) to the cars directly—the same way that smartphones and computers receive updates. Such software updates are called Over-the-Air (OTA) Car Updates.
