According to our (Global Info Research) latest study, the global Automotive Parts Inspection and Quality Control market size was valued at US\$ 19234 million in 2025 and is forecast to a readjusted size of US\$ 28106 million by 2032 with a CAGR of 5.7% during review period.

Automotive parts inspection and quality control encompasses quality testing, performance verification, dimensional measurement, reliability testing, defect identification, and quality management services for components?such as engine systems, power batteries, chassis systems, body structures, electronic and electrical systems, intelligent driving components, and interior/exterior trim?across the entire lifecycle, including R&D, supplier production, incoming material inspection, manufacturing, assembly, final inspection, and after-sales service. By employing technologies such as manual inspection, automated inspection equipment, machine vision, coordinate measuring machines (CMM), non-destructive testing (NDT), material analysis, environmental reliability testing, in-line monitoring systems, and digital quality management platforms, this sector ensures that components meet the standards of original equipment manufacturers (OEMs), regulatory requirements, and customer quality specifications. These efforts mitigate the risk of component failure while enhancing the safety, reliability, and service life of the vehicle.

As the global automotive industry rapidly shifts toward new energy vehicles (NEVs), intelligent driving, and automotive electronics, the market for automotive parts inspection and quality control continues to expand. The rise of NEVs has introduced a vast array of new components?including power batteries, electric motors, electronic control units, power semiconductors, smart cockpits, and sensors?imposing stricter

requirements for dimensional precision, safety performance, electrical reliability, and longevity. Simultaneously, the globalization of automotive supply chains and the industry's emphasis on "Zero Defect" manufacturing, smart manufacturing, and Supplier Quality Management (SQM) are driving growing demand for third-party testing agencies, automated inspection equipment providers, and digital quality management software. Future industry development will focus on AI-based visual inspection, robotic automated inspection, digital twin-based quality management, in-line inspection systems, and specialized testing for core NEV components.
