According to our (Global Info Research) latest study, the global Automotive Plastic Fuel Tank Tie Layer Resins market size was valued at US\$ 315 million in 2025 and is forecast to a readjusted size of US\$ 390 million by 2032 with a CAGR of 3.1% during review period.

The automotive plastic fuel tank tie layer resins is usually maleic anhydride grafted polyethylene (PE-g-MAH), also known as bonding resin or compatibilizer. It is mainly used to connect the interface between high-density polyethylene (HDPE) and barrier layer materials (such as ethylene-vinyl alcohol copolymer EVOH) to solve the bonding problem between different materials. PE-g-MAH chemically reacts with the polar groups of EVOH through maleic anhydride groups, and has good compatibility with HDPE, thereby ensuring that the layers in the multi-layer structure of the fuel tank have a strong bonding strength and meet the sealing and mechanical performance requirements of the fuel tank in long-term use.
