According to our (Global Info Research) latest study, the global Automotive Port Fuel Injection System market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Automotive Port Fuel Injection (PFI) System is mainly used in diesel engines, as only diesel engines use compressed air for the fuel ignition system. To work this ignition system out, diesel engines rely on the fuel injection process. In port fuel injection, gasoline or diesel is sprayed into the intake ports of the cylinder where air and fuel are mixed to a proportion and then pulled into the engine cylinder. High air-fuel efficiency ratio and use of manifold injection for metered fuel supply are the factors considered to drive the port fuel injection system market growth.
