Abstracts

The global Automotive Port Fuel Injection System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Automotive Port Fuel Injection (PFI) System is mainly used in diesel engines, as only diesel engines use compressed air for the fuel ignition system. To work this ignition system out, diesel engines rely on the fuel injection process. In port fuel injection, gasoline or diesel is sprayed into the intake ports of the cylinder where air and fuel are mixed to a proportion and then pulled into the engine cylinder. High air-fuel efficiency ratio and use of manifold injection for metered fuel supply are the factors considered to drive the port fuel injection system market growth.

This report studies the global Automotive Port Fuel Injection System production, demand, key manufacturers, and key regions.
