Abstracts

According to our (Global Info Research) latest study, the global Automotive Positive Crankcase Ventilation Valve (PCV Valve) market size was valued at USD 11750 million in 2023 and is forecast to a readjusted size of USD 13200 million by 2030 with a CAGR of 1.7% during review period.

A automotive positive crankcase ventilation valve or PCVV is supposed to regulate the flow of these gases is the heart of most PCV systems (some newer vehicles don't have a PCV valve).. The Positive Crankcase Ventilation Valve system lures unburned fuel and exhaust gas from the engine block and direct them into the engine through the intake manifold, where they are burned completely in the combustion chambers instead of its resealing into the atmosphere through vehicle exhaust system.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
