The global Automotive Power Seat Recliner market size is expected to reach \$ 97.9 million by 2030, rising at a market growth of 4.6% CAGR during the forecast period (2024-2030).

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.

An automotive seat consists of a large number of parts and mechanisms. Major parts of the seat are frame, padding, seat pan, head restraints system, reclining mechanism with lever, trim (seat cover), and suspension. Automotive seat recliner is a key component in automotive seating systems. It provides comfort for neck, spine, and foot while driving. High-quality steel or magnesium is used for producing recliners so that they can withstand strong forces during accidents.
