Abstracts

The global Automotive Power Transformer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The industrial chain of automotive power transformers mainly includes upstream raw material and component suppliers, midstream transformer manufacturers, and downstream automobile manufacturers and electrical equipment manufacturers. Among them, ferrite cores, silicon and silicon carbide are important raw materials for upstream components, and control chips, inductor coils, capacitors and power semiconductors are upstream components. Midstream transformer manufacturers mainly include Taiwanese manufacturers such as Delta, Lite-On, Chicony, and Kangshu, as well as domestic manufacturers such as TBEA, Baobian Electric, and Huapeng Transformer. Downstream car manufacturers and electrical equipment manufacturers cover various brands and types of cars and equipment, such as Volkswagen, Toyota, Honda, Mercedes-Benz and other car brands, as well as equipment brands such as navigators, refrigerators, and air conditioners. The industry of automotive power transformers is the automotive supporting industry. With the development of new technologies such as new energy vehicles and intelligent connected vehicles, the automotive supporting industry is also facing new opportunities and challenges. In 2022, the market size of China's auto accessory industry will reach 1.8 trillion yuan, a year-on-year increase of 8.5%. Among them, the new energy vehicle supporting market will reach 1.2 trillion yuan, a year-on-year increase of 15.6%. It is estimated that by 2025, the market size of China's auto accessory industry will grow to 2.4 trillion yuan, and the market size of new energy vehicle accessories will grow to 2 trillion yuan. Therefore, as an important part of new energy vehicles, automotive power transformers also have broad development prospects.

An automotive power transformer is a transformer with only one winding wound on a laminated iron core, also known as an autotransformer. Its function is to convert the 12-volt or 24-volt direct current of the car into alternating current or direct current of different voltages for use by various electrical equipment, such as navigators, refrigerators, air conditioners, etc.
