## Abstracts

According to our (Global Info Research) latest study, the global Automotive Press-Fit Terminals market size was valued at US\$ 3027 million in 2024 and is forecast to a readjusted size of USD 3673 million by 2031 with a CAGR of 2.8% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Automotive press-fit terminals are specialized connectors used in vehicle electronic systems, designed to create secure, solderless connections between components and printed circuit boards (PCBs). These terminals rely on precise mechanical interference, where their pins are pressed into plated through-holes on the PCB, forming a robust electrical and mechanical bond. Known for their reliability, vibration resistance, and ease of assembly, they are widely used in automotive applications, including control units, sensors, and infotainment systems.

From the perspective of product market application, applications common to new energy vehicles and fuel vehicles currently occupy the main fields, such as sensors, engine management, airbags, ABS systems, steering systems, etc., but the trend of the fuel vehicle market shrinking is becoming more and more obvious, and the annual compound rate of engine management unit application from 2024 to 2030 is -2.48%. The transformation of automobile power from traditional fuel to battery output has a wide impact on the development of the automotive electronics industry. Electronic systems such as battery management control systems, electronic controls, and motors have expanded the extension of automotive electronic products. At present, there is a

large penetration rate in the inverter IGBT of new energy vehicles, and there will be more applications in other new energy vehicle applications in the future. Factors such as domain controllers generated by the integration of automotive electronic and electrical architectures and ADAS control modules added due to the improvement of autonomous driving functions will have a great impact on the application market of automotive press fit terminals.
