According to our (Global Info Research) latest study, the global Automotive Programmable Gamma Buffers (APGB) market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Automotive Programmable Gamma Buffers (APGB) are integrated circuits used in automotive displays to enhance the gamma correction process. APGBs are designed to adjust the brightness and contrast of the display by modifying the gamma curve of the image. They are programmable, which means that the gamma curve can be modified in real-time to adapt to different lighting conditions and to provide the best possible viewing experience. APGBs are used in conjunction with other display components, such as LCD drivers, to create a high-quality display that is optimized for the automotive environment. They are also designed to operate under extreme temperature and vibration conditions.
