The global Automotive Programmable Gamma Buffers (APGB) market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Automotive Programmable Gamma Buffers (APGB) are integrated circuits used in automotive displays to enhance the gamma correction process. APGBs are designed to adjust the brightness and contrast of the display by modifying the gamma curve of the image. They are programmable, which means that the gamma curve can be modified in real-time to adapt to different lighting conditions and to provide the best possible viewing experience. APGBs are used in conjunction with other display components, such as LCD drivers, to create a high-quality display that is optimized for the automotive environment. They are also designed to operate under extreme temperature and vibration conditions.
