Abstracts

The global Automotive PVC Compound market size is expected to reach \$ 1554.3 million by 2029, rising at a market growth of 3.0% CAGR during the forecast period (2023-2029).

With the continuous development of the automotive industry, the requirements for performance of automotive components are becoming increasingly stringent. Against this backdrop, there is a growing demand for automotive PVC compounds. PVC compounds find widespread applications in automotive interiors and exterior parts, enhancing products' weather resistance, abrasion resistance, and chemical corrosion resistance, thus meeting the automotive industry's demand for high performance and long-term reliability of materials. Additionally, with the increasing awareness of environmental protection in recent years, there is a growing emphasis on low volatility and low formaldehyde emissions, leading to a significant interest in eco-friendly PVC compounds in the market. It is anticipated that with the increasing demands for safety, comfort, and environmental performance in the automotive market, the market for automotive PVC compounds is poised for continued expansion.

PVC compound is a modified form of PVC resin. It is created by blending PVC resin with various additives, plasticizers, stabilizers, and fillers. These additives are incorporated to enhance specific properties of the PVC resin and make it suitable for a wide range of applications. The additives can be in the form of powders, liquids, or pastes, depending on the desired characteristics of the PVC compound.
